

gripfit® - Installation Specification Guide

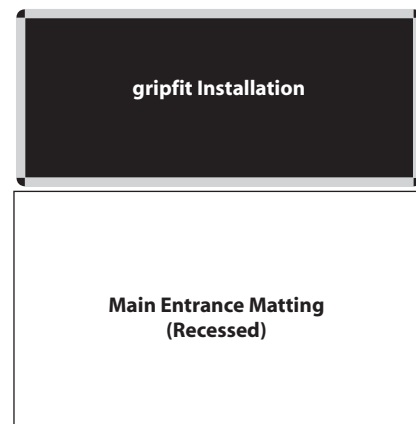

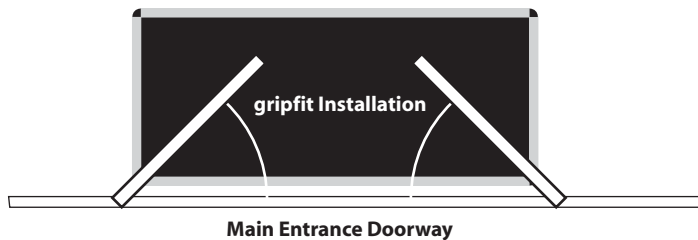

Secure Mat Systems

The following guide has been compiled to demonstrate the areas that the gripfit® system can be used to enhance safety and security for businesses and commercial properties that allow access to public or employees.

We have listed the key areas in different sites where gripfit can assist in reducing risks associated with slips and trips.

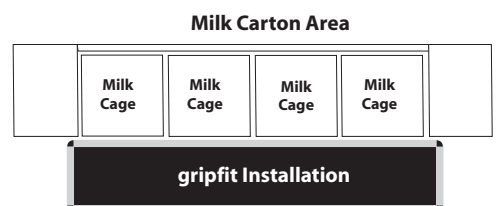

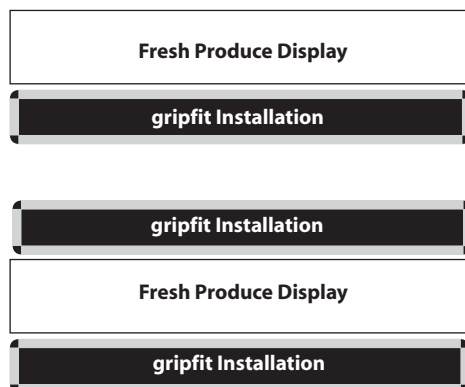

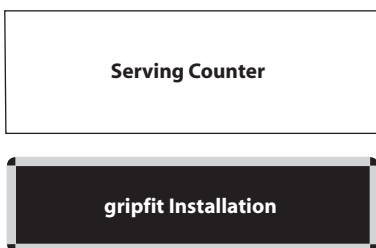

gripfit® in use at Entrances

For use in areas where no mat is used, or where a recessed mat is installed, but is inefficient at removing moisture. Therefore increasing risk of slips accidents in wet weather conditions.

Due to the low profile of the gripfit frame, it can be installed next to most doors, as long as the door has a 9mm gap when opening.

gripfit® for use in horizontal circulation, and key risk areas

As the gripfit system has been designed as a modular use product, it can be installed in a wide variety of areas to assist in slip and trip reduction. For example as shown above; Food service counters, serving counters, etc. to reduce risk to staff from slip injuries; Fresh produce display areas, the system can be installed along all gondolas to reduce risk of slips on spilt items, as gripfit is modular it can be installed to any length, and also; for use around dairy products, to control spills.

There are many more uses for the gripfit system and should you have any further ideas or thoughts please call a gripfit representative on 08700 208869, or visit www.gripfit.net

Introducing the **gripfit**[®] Surface Mounted Matting System

We would like to introduce the new **gripfit**[®] product range, designed to solve trip and slip related issues and loose laid matting problems. **gripfit**[®] has been developed with leading entrance matting manufacturers such as 3M and Milliken, access consultants and serviced matting Companies to provide a system that secures a loose mat to the floor and still allow for the benefit of the mat being serviced on a weekly or fortnightly basis. **gripfit**[®] is a secure matting system for Companies who wish to comply with the technical requirements and consider the duties contained within the DDA and BS 8300:2001.

The system comprises of an aluminium frame that is fixed to any hard floor - a loose mat is then placed within the frame and an upper aluminium extrusion clamps the mat securely into place. The system has a combined height of only 7.5mm and offers further benefits of providing a tactile surface as set out in the DETR regulations.

- Ability to handle high volumes of foot traffic
- Benefits sites that require multi placement locations
- Can be installed on slopes and ramps
- Designed to be used in sites that have wheeled traffic
- Increases the levels of safety to large entrance areas

Key Product Benefits

- **gripfit**[®] allows mats to be easily removed for cleaning/replacing
- **gripfit**[®] is a specifically designed entrance flooring system, which can be fitted in any location
- Loose matting is held securely in place by its edges, without the use of adhesives
- Ultra Low profile design, combined height of 7.5mm
- Allows doors to open and close over the frame with no movement of matting
- Tactile edging allows visually impaired users to clearly know they are moving between different floor surfaces
- **gripfit**[®] can be used on slopes and ramps

Key Site Benefits

- Mats stay in place, where they are most effective
- Mats cannot be moved by staff members, who may have previously moved mats to alternative locations
- Money spent on matting is ensured as mat is always in use, in its best location
- **gripfit**[®] can be installed onto any hard floor surface, vinyl, wood, laminate, concrete, and terrazzo floors
- Minimal damage to floor surfaces, as product is screwed or glued to the floor surface
- Quick installation and removal for non-fixed displays
- Professional installation ensures that the product is placed correctly each time
- Mats are held securely in place, and cannot be removed without the using the **gripfit**[®] tool
- Mats are held securely in place at their edges enhancing security and stability

Cost Savings

- No need to dig a mat well, as the system is surface mounted
- Minimal installation time, 30 minutes approx.
- Almost no business interference
- Minimal levels of dust created, as no digging is required

Product Design

- **gripfit**[®] has been designed to withstand the highest volumes of traffic from general to heavy duty use
- Tested in warehouse stores, average traffic per day, 350 loaded stock cages, 350 empty cages, 150 loaded pallet trucks, and 150 unloaded pallet trucks. Tested over a 6 month period, the frame was slightly dented but the mat was held securely in place
- Ideal for front loading stores
- Can be used to reduce soiling from warehouses to retail areas
- Can be used to hold mats securely in place in wet areas, or kitchens
- **gripfit**[®] allows forklift trucks to drive over the frame removing moisture from its wheels

We are certain that you will recognise the benefits of the **gripfit[®] system and should you wish to be sent more information call **gripfit**[®] on 08700 208869 or visit www.gripfit.net**
